

Bombigro™ Gives an Extra Yield Boost

Take your input program to a new level with Bombigro™

Bombigro™ is a powerful, foliar-applied soil amendment produced through a unique fermentation process. This biologically derived product contains organic acids and unique yeast metabolites that are absorbed directly through the leaf surface for fast-acting benefits. Suitable for an array of crops, Bombigro is a valuable addition to any Locus AG biological program. It provides the extra edge growers need from their input programs to maximize productivity and profitability.

How Bombigro Works

Enhances Photosynthesis

Improves Plant Vigor

Boosts Crop Yield

Average Yield Increases

Trials confirm that Bombigro increases yields as a standalone foliar treatment in crops including corn, soybeans, wheat and potatoes. When paired with Locus AG's Rhizolizer® biologicals, it delivers even greater results.

YIELD INCREASE

Bombigro + Locus AG Biologicals

7%-14%

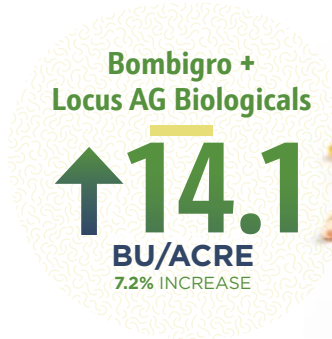

YIELD INCREASE

A simply vital choice. Get started now.

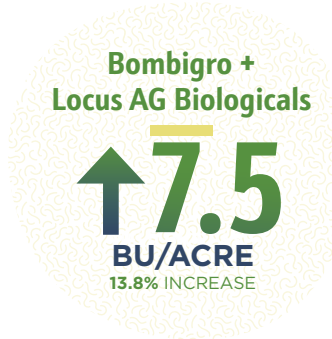

Trial Results by Location

At Locus AG, it's not what we say. It's what the data proves. That's why we partner with contract research organizations (CROs) around the country to test our biological products on a variety of crops. These third-party trials provide independent analysis on important data points for farmers such as yield.
